One of the most important AND least understood sections of the 2017 Canadian Electrical Code is the section on Electrical Grounding and Bonding. This basic electrical grounding course is founded on the 2017 Canadian Electrical Code and is designed to give you the correct information you need to design, install and maintain effective electrical grounding systems in industrial, commercial and institutional power systems.

This course addresses all changes on Grounding & Bonding included in the 2015 CEC. The 2017 CEC recognizes materials other than copper for uses as a grounding conductor in ten different articles of the code. It also addresses some electronic equipment is subjected to destruction of data, erratic equipment operation, and catastrophic damage. This electrical grounding and bonding training course will give participants a comprehensive understanding of practical applications of proper grounding and bonding practices that will comply with the 2017 Canadian Electrical Code.
